# Product Information
# Davis 5: Improvements and Modifications in V 4.20

Note: It is **necessary** to use Davis 5 version 4.20 in combination with the latest mPDS 5 SW version 6.0.

| | | |
|---|---|---|
| 1 | **Restore Davis 5 database** | The new version allows the skilled administrator to restore an entire Davis 5 database (To migrate a Davis 5 database in case of changing the Davis 5 server machine). <br> This feature is also useful to analyze customer database in the course of field tests for trouble shooting. |
| 2 | **Production summary report** | Create a report for all batches and all products for several weeks in a single file. |
| 3 | **Export of production summary reports** | It is possible to export the production summary report as a CSV file. <br> These files can be imported into external software tools. |
| 4 | **Calibration or adjustment report** | By grouping data from certain sections you can create e.g. a table of all calibrations or adjustments. It is possible to recognize drifts of process or laboratory reference instruments. |
| 5 | **Trend report lists measurement data at cursor position** | The trend report print out contains the measurement values at the cursor position in addition. |
| 6 | **Offsets/Gain factors in product settings window** | The product settings window displays the current offsets and gain factors of all measurement values. |
| 7 | **Product lists optionally contain adjustment parameters** | It is possible to include the adjustment parameters (offsets/gain factors) in the product list (print out). |
| 8 | **Several bug fixes and improvements** | |
