Professional

RH/T/Pressure data logging

Network data logging - new defined!

Novasina, a leading manufacturer of precision humidity and temperature measurement devices with more than 50 years of experience is proud to present the new data logger series HygroGuard 30 / DataLog 30 / ClimaLog 30.

HygroGuard 30 | ClimaLog 30 | DataLog 30

Get your climate any time under control Modern digital Thermo-Hygrograph measurement devices

Facts & figures :

Operation temperature -20 ... +50°C

humidity 0 ... 95%RH altitude up to 10'000 a.s.l.

- Big clear readable 3 line LCD screen
- Standard 4 x AA batteries for stand-alone use
- Dimensions: 166 x 32 x 78 mm
- Power supply by 5V USB connector possible
- USB and ethernet TCP/IP interface (ready for managed PC networks)
- Calibration/adjusting by included SmartGraph III software
- More than 3 Mio data point logging memory
- Included SmartGraph III software for configuration, calibration, adjustment,data visualisation & export
- DIN rail mounting H35 possible
- Internal acoustic alarm signal combined with LCD alarm sign
- Flexible data measurement & storage intervall

he new Novasina relative humidity, temperature and absolute pressure data loggers for various applications in the air environment excel with versatility, simplicity and data storage capacity.

Essential keys of this system are the USB interface (offline readout) and the managed ethernet, TCP/IP connection (online) by which these data loggers transfer the detected data to a storage device, e.g. a PC. Another asset is the intuitive SmartGraph III software, which simplifies the management of the 3'200'000 data points that can be stored. The big LCD gives a clear view about the actual measurement data as well as battery status, connections, actual date and time. The outstanding data storage capacity allows an independent function for a long period of time. Manifold configuration possibilities such as settings of visual and acoustic alarms, data logging intervals, start/stop functions etc. make these devices versatile and flexible.

These data loggers are the best choice for stand-alone or network applications in laboratories, warehouses, server rooms, archives, production processes, museums, basements, transportation and many more...

3 versions are avalilable:

HygroGuard 30 (%RH, temperature, dew point)

ClimaLog 30 (%RH, temperature, absolute pressure)

DataLog 30 (8x UMB Bus + 2 Al interfaces)

no internal sensors
